

Maven Fuzzy Factory: **Bridging Marketing Acquisition with Unit Economics**

GROUP - 4

BI Project submitted to Dr. Sanchita Kuchi

INTRODUCTION TO DATASET

Company Background

Maven Fuzzy Factory primarily manufactures and sells four products through e-commerce channels and acquires all of its customers via digital marketing and ads.

Data Source

The Data is sourced from Kaggle

<https://www.kaggle.com/code/rubenman/maven-fuzzy-factory/notebook>

Nature of Data

The data is numeric and split across different tables consisting various metrics related to customer's UI interaction, UTM source, order value, loyalty, refund, selling price, cost price.

Why this analysis matters

By analyzing and building a dashboard the company can have real time access over how each of their product and marketing campaign perform. Allowing them to quickly adapt to changes and optimize their revenue.

ANALYTICAL LENSES

1
.

Marketing & Attribution

How we find customers and move them to thank you page.

2
.

Financial & Unit Economics

Maximizing profit and actual cash value of every order after cost.

3
.

Customer Lifetime Value

Building a sustainable business through repeat buyers.

PROBLEM STATEMENT

Which attribute affects profit the most?

Objective of the analysis:

To create a real time representation of dynamic data to enable high visibility and take quick actions to better optimize operations

METHODOLOGY

Understanding Data:

All tables were linked using unique identifiers allowing cross table comparisons.

Key Metrics & Dimensions:

Metric: Profit

Dimensions:
Timeline, Product, UTM
Source,
UTM Campaign, Refund.

Creating Sub Questions:

1. What is profit across time?
2. What is profit across product?
3. What is profit across time per product?
4. Which product brings the most order?
5. Total no of orders across time?
6. Which UTM source brings in the most customers?
7. Which UTM campaign is the most effective?
8. Total revenue per across products?
9. What is the refund rate across products?
10. What is the gross refund across products?

KEY INSIGHTS

- 1) The parallel movement of orders and profit suggests that profit is directly volume-driven, meaning the business has always been above its breakeven sales.
- 2) The company is heavily dependent on one flagship product (Original Mr. Fuzzy) for its profitability.
- 3) Majority of customers are discovering the product through non-branded keyword search campaigns.
- 4) Original Mr. Fuzzy is the flagship product, driving the majority of demand and likely attracting customers to the website. The other products function more like supporting items rather than primary revenue drivers.
- 5) The low contribution from social media suggests that organic or paid social marketing is underutilized.

BUSINESS RECOMMENDATION

Reduce Product Concentration Risk:

Invest in product development for new teddy bear variants or themed products.

Leverage the Flagship Product for Cross-Selling:

Introduce product bundles (e.g., Mr. Fuzzy + Mini Bear combo).

Strengthen Brand Awareness:

Invest in brand marketing campaigns (display ads, influencer marketing, content marketing).

Improve Social Media Strategy:

Run targeted social media campaigns showcasing cute teddy products.
Use UGC (User Generated Content) and influencer promotions.
